Pivot-mode evolution through the double-inflation turn
power normalized by $\mathcal{P}_* = H_*^2/(8\pi^2\epsilon_*)$
$N - N_*$
$\eta_\perp$
$\mathcal{P}_R/\mathcal{P}_*$
$\mathcal{P}_S/\mathcal{P}_*$
$\eta_\perp$
turn at $N - N_* = 12.5$
final $\mathcal{P}_\mathcal{R}(k_*) = 2.10e-09$
